

Junaid Mundiya, DMD

Oral & Maxillofacial Surgeon

Clinical Continuing Education

Precision. Surgical Judgment. Clinical Mastery.

Speaker Profile

Dr. Junaid Mundiya, DMD is a practicing Oral and Maxillofacial Surgeon who lectures to dental societies, study clubs, hygiene programs, and interdisciplinary audiences. His lectures focus on clinical decision-making, complication prevention, and evidence-based care designed specifically for the practicing dentist. His presentation style is structured, practical, and directly applicable to everyday practice. Attendees leave with clear protocols, increased confidence, and immediately implementable strategies to improve patient safety and clinical outcomes.

Advanced Surgical Education for the Modern Dentist

Evidence-driven lectures designed for clinicians who want clarity in complex surgical decision-making.

Focused on risk management, complication prevention, and elevating everyday procedural confidence.

Structured frameworks that translate immediately into safer and more predictable outcomes.

Signature Lecture Portfolio

Anticoagulants in Dental & Oral Surgery

- Comprehensive review of anticoagulant and antiplatelet management in dental and oral surgical procedures, with practical bleeding protocols and risk stratification.

Medical Emergencies in the Dental Office

- Recognition and management of medical emergencies including syncope, anaphylaxis, cardiac events, and airway compromise.

Bone Grafting for Implant Success

- Biologic principles, graft materials, case selection, and predictable surgical approaches for ridge preservation and augmentation.

Full-Arch Rehabilitation (All-on-X)

- Overview of full-arch implant concepts, patient selection, surgical principles, and restorative workflows.

PRF in Surgical Dentistry

- Preparation protocols and clinical applications of PRF in oral surgery and implant dentistry.

Signature Lecture Portfolio

Postoperative Complication Management

- Identification, prevention, and management of common postoperative complications including infection, bleeding, nerve injury, and dry socket.

TMJ: Medical & Non-Surgical Protocols

- Diagnosis and evidence-based conservative treatment protocols for temporomandibular joint disorders.

Hard & Soft Tissue Pathology Review

- Radiographic interpretation and differential diagnosis of common jaw lesions relevant to general practice. Clinical recognition and management of common and high-risk oral soft tissue lesions.

Head & Neck Examination Excellence

- Comprehensive head and neck examination techniques with emphasis on oral cancer screening.
